Introduction

Commissioned by the United Way of San Antonio and Bexar County on behalf of a broader partnership, this Westside Promise Neighborhood Profile presents quantitative data to inform planning for a Westside Promise Neighborhood. As described in greater detail in the Technical Notes, the Neighborhood Profile draws on reliable state and local datasets to paint a quantitative picture of area characteristics and of the strengths of and challenges faced by the children and families who live there. The data presented here are intended to complement and inform community voice emerging from the qualitative data and critical conversations held with neighborhood families and partner agencies like San Antonio Independent School District.

The Neighborhood Profile is organized into five topical sections: *Physical Characteristics and Population*; *Households and Families*; *Employment, Income, and Poverty*; *Education*; and *Health and Safety*. A supplementary *Technical Notes* section provides reference maps, notes on data sources, and cautions. Although data availability drives some variation, typically each section presents:

- Data tables showing a five-year trend, where available, for Westside Promise Neighborhood, defined as zip code tract area 78207 unless otherwise specified;
- Data tables showing a current snapshot comparison of Westside Promise Neighborhood with Bexar County, or in the case of the education data, with San Antonio Independent School District and Texas; and
- Narrative highlights of noteworthy patterns in the data, particularly in terms of disparities between Westside Promise Neighborhood and comparison geographies.

Much of the data used in this Neighborhood Profile comes from American Community Survey or some other survey and thus has a margin of error associated with the sample. The abbreviation "MOE" is used for margin of error throughout, whereas "Confidence Interval" is abbreviated "CI". Wherever a "." appears in a table, that data point is not currently available.

1. Physical Characteristics and Population

The Westside Promise Neighborhood (WPN), a predominately Hispanic neighborhood, covers 7.26 square miles and one zip code (78207) just west of downtown San Antonio.

Key Points

- WPN's population density is five times that of Bexar County.
- WPN age distribution is similar to that of Bexar County but is 20% younger compared to that of the United States, with 31.3% percent of the WPN population 19 or younger compared to 26% in the U.S.
- A predominantly a Hispanic neighborhood of Mexican Heritage, the overwhelming majority of WPN residents are Hispanic (94%). The racial/ethnic distribution has remained stable over time.

2. Households and Families

Housing Ownership and Housing Affordability

Key Points

- Despite the high population density, the WPN housing unit vacancy rate, a common measure of neighborhood blight, is 57% higher than that of Bexar County.
- In 2015, the median home value in the WPN was less than half that of the county, at \$58,000 compared to \$129,400 in Bexar County
- More than half of all households are renter-occupied, significantly higher than Bexar County. The trend of renter-occupied units is increasing in both WPN and Bexar County.
- Nearly two-thirds of all WPN owner-occupied households do not have a mortgage, indicating some
 degree of housing stability for these families. Because Texas has no income tax, however, property
 tax foreclosure is often a threat for lower-income people, especially younger people who do not
 qualify for the "over 65" property tax exemption.
- The percentage of total occupied housing units with costs greater than 30% of household income is 28% less than that of Bexar County. Although only 22% of owner-occupied housing have costs greater than 30% of income, more than half of renter-occupied housing units incur higher costs relative to income.

Household and Family Characteristics

Key Points

- The percent of WPN households that are headed by a married-couple family is significantly lower than Bexar County, and WPN households are almost twice as likely to be headed by a female householder with no husband present.
- WPN families are more likely than Bexar County families to have both younger and older children in the house.
- A somewhat smaller percentage of WPN grandparents living with their grandchildren are responsible for the care of those grandchildren compared to Bexar County. This trend has declined from 2011 to 2015 in both WPN and the county.

3. Employment, Income, and Poverty

Employment and Labor Force Participation

Key Points

- There has been an increase in the WPN adult population (ages 20 to 64) in the labor force. The labor force includes people who are employed or are unemployed and looking for a job, but not people who are unemployed and for any reason not seeking work.
- WPN adult females are just as likely as males to be in the labor force, unlike Bexar County.
- WPN's percent of working age male and females who are in the labor force and are unemployed is twice as high as that of Bexar County.

Table 3.1 WPN Percent of Working-Age Adults in Labor Force, Employed, and Unemployed

	2011	2012	2013	2014	2015
	n (MOE)

Income and Poverty Level

Key Points

- Both WPN median household income and median family income are less than half that of Bexar County.
- The proportion of all WPN residents (41%) with incomes below the federal poverty level (FPL) is more than double that of Bexar County (17%).
- WPN families are nearly three times more likely to be under the federal poverty level compared to Bexar County. The percent of families below the poverty has remained stable over recent years.

4. Education

Educational Attainment Among Neighborhood Adults

Key Points

- WPN adults 25 and older are nearly three times as likely as Bexar County not to have high school diploma or GED.
- Bexar County adults are six times as likely to have Bachelor's or graduate degree.
- A sizable proportion of WPN adults, though, have some college and might be able to complete a degree with appropriate supports.
- With margins of error considered, no meaningful trend emerges across time; educational attainment for WPN adults is stable.

Table 4.1. Percent of WPN adults age 25 and older by highest level of education attained

	2	011	2012		2	:013	2	:014	2	015

Neighborhood Enrollment in School

Key Points

- The Percentage of 3- to 4-year olds enrolled in school, either public or private, is low but comparable to Bexar County and Texas. (Enrollment is not required until first grade.)
- Enrollment is high among WPN children and teenagers 5 to 17 years old.
- A large percentage of WPN adults 18 to 24 years old are not enrolled in school at all 80% of males and 67% of females a rate much higher than Bexar County or Texas.
- A larger proportion of young adults age 18 to 24 and older adults 35 and over who are enrolled anywhere are in private schools, but still most in public schools.

Source: U.S. Census Bureau, American Community Survey 5-Year Estimates, Table S1401

Early Childhood and Kinder-Readiness

Key Points

- Only about one in five WPN first-graders is considered "very ready" to learn per the Early
 Development Instrument (EDI), comparable to the full set of assessed first-graders in participating
 school districts.
- WPN first-graders are somewhat more likely that the full set of first-graders to be assessed as vulnerable in two or more EDI domains
- No meaningful trend emerges over time for WPN despite modest gains for the full set of first-graders assessed.

Table 4.4. Percent of WPN first-graders considered vulnerable or very ready to learn

	2012	2013	2014	2015
Vulnerable in two or more domains	13.8%	15.8%	14.7%	14.3%
Very ready in four or more domains	19.6%	19.6%	16.5%	21.0%

Source: United Way of San Antonio and Bexar County, Early Development Instrument, 2012-2015

Table 4.5. Percent of all assessed first-graders* considered vulnerable or very ready to learn

	2012	2013	2014	2015
Vulnerable in two or more domains	14.5%	11.7%	11.3%	11.0%
Very ready in four or more domains	17.8%	22.4%	23.5%	23.9%

Source: United Way of San Antonio and Bexar County, Early Development Instrument, 2012-2015 *Trended dataset consists of assessed first-graders residing in 245 census tracts in the following school districts: Edgewood ISD, Harlandale ISD, North East ISD, Northside ISD, and San Antonio ISD

Target Campus Enrollment and Student Characteristics

Key Points

- All three target campuses have high student enrollment.
- Tafolla Middle School's enrollment has been declining, but elementary and high school enrollment are holding steady or growing.
- Students are overwhelmingly Hispanic at all three campuses.
- Students are overwhelmingly economically disadvantaged at all three campuses, but the percentage is lower and appears to be dropping slightly at Lanier HS.
- The percentage of students at-risk is growing over time at Lanier HS and Tafolla MS, but dropping at JT Brackenridge ES.
- Percentage of ELL students is pretty steady at JT Brackenridge ES and Tafolla MS, but growing at Lanier HS.
- Special Education enrollment is growing as both a number and a percent at JT Brackenridge ES and Tafolla MS, but dropping at Lanier HS.

Target Campus Student Attendance, Mobility, and Dropout

Key Points

- JT Brackenridge ES and Tafolla MS are struggling on ADA, but Lanier HS is improving slightly over recent years.
- The percentage of students mobile by the TEA definition a student-level measure rather than the GPRA campus-level measure is dropping markedly at JT Brackenridge ES, and less so at Lanier HS, but increasing at Tafolla MS. This mobility pattern echoes the enrollment pattern.
- Lanier HS's Grade 9-12 dropout rate is consistently lower than SAISD but consistently higher than Texas.

Table 4.10. Average Daily Attendance and Mobility by Campus by School Year

Campus/Comparison	2011-12	2012-13	2013-14	2014-15	2015-16	2016-17

Target Campus Performance on Standardized Tests

Key Points

- Due to the multiple changes over recent years in the threshold for passing the STAAR standardized test, the percent passing cannot be compared year-to-year. Because the threshold has been the same across all of Texas, however, the ratio WPN percent passing to SAISD and Texas percent passing can be examined for trend.
- WPN students have been passing 3rd grade reading and math standardized tests at a slightly higher rate than San Antonio ISDI, comparable with Texas overall. However, the trend is that that gap is closing either WPN 3rd graders are doing worse over time, or TX is doing better.
- WPN English Language Learner (ELL) students fall somewhat behind the rest of the campus in math and far behind in English by high school End-of-Course (EOC) exams.

Table 4.12. Percent of Students Passing Standardized Test by Grade Level and Subject, with Comparisons

Target Campus Suspension and Expulsion

Key Points

- Tafolla MS students were twice as likely as Lanier HS students to have one or more in-school suspensions (detentions). The same is true for out-of-school suspension.
- The rate of expulsions per 1,000 enrolled students at Tafolla MS is more than ten times higher than the rate at Lanier HS.

Target Campus Graduation, College Readiness, and College Enrollment

Key Points

- Although Lanier HS's four-year federal longitudinal graduation rate "bounces around" somewhat, it
 is higher than that of SAISD and improving over recent years. It still lags Texas' federal graduation
 rate.
- Lanier HS's percentage of students considered college-ready in both English and math lags far behind both SAISD and Texas. The college-ready measure was calculated differently beginning in 2014-2015, but the disparity remains consistent.
- The percentage of Lanier's graduates in TX IHE that complete one year without remediation is improving over time.

Table 4.16. Four-Year Federal Longitudinal Graduation Rate (Without Exclusions)

	Class of 2011	Class of 2012	Class of 2013	Class of 2014	Class of 2015

5. Health and Safety

Births and Death

Key Points

- The percentage of birth following late or no prenatal care has increased in both WPN and Bexar Co.
- WPN teen birth rate (15 to 19 years) per 1,000 female population is almost twice as high as that of Bexar County.
- Rate of pregnancy and childbirth complications is higher in WPN than Bexar County.
- Average age at death is slightly lower than the county average, thus WPN residents die younger than the Bexar County and U.S. average.

Table 5.1 WPN Births

	2011	2012	2013
Total Live Births	984	979	1,043
Births Following Late or No Prenatal Care	34.7%	42.5%	50.3%
Pre-term Births	13.2%	13.5%	12.8%
Teen Birth Rate (15 to 19 Years) per 1,000 pop	64.6	72.6	68.7

Food Accessibility

Key Points

 All of the census tracts within WPN are low income, with some also having low accessibility to supermarkets with healthy food.

Figure 5.2 Food Access

Health Insurance

Key Points

• WPN residents, especially adults ages 18-64, are two times more likely to be uninsured when compared to Bexar County. Insurance trend remains stable.

Table 5.6 WPN Population Percent with No Health Insurance by Age Group

	2012	2013	2014	2015	
	n (MOE)	n (MOE)	n (MOE)	n (MOE)

Mental Health

Key Points

 Hospitalizations with a Mental Illness diagnosis are less common among WPN residents ages 65 and older than Bexar County.

Table 5.8 WPN All-Cause Hospitalizations with a Mental Illness Diagnosis per 10,000 Population

	2011	2012	2013	2014	2015
Age 18-64	106.9	108.7	96.9	85.9	117.4
Age 65 and older	43.9	51.4	23.4	37.2	39.6

Juvenile Probation Mental Health and Substance Use Screening

Key Points

- WPN girls referred to juvenile probation are screening at moderate/high risk for various mental
 health and substance use issues at least as often as boys in every category, and screen higher than
 boys in several areas. (Girls aren't screened for thought disturbance because it's so much more
 common in boys.)
- Screening results indicate that younger children age 10-13 are at moderate/high risk as well, not just older children.

Table 5.10 Comparison of Juvenile Probation Intake MAYSI-2 Screening Results, 2008-2009: WPN and Bexar County

^{*}Percent of assessments, not unduplicated people

Crime

Key Points

- The rate of family violence incidents per 1,000 population is almost two times higher for WPN residents when compared to Bexar County. One incident may involve one or many victims.
- The WPN violent crime rate per 1,000 population is similar to that of Bexar County.

Table 5.11 WPN Crime Rate

	2012	2013	2014	2015
Violent Crime Rate per 1,000 population	4.7	7.5	5.4

Technical Notes

Data Sources

This neighborhood profile contains quantitative data for a wide range of indicators related to child and family well-being and ability to engage and do well in school. Where available, indicators have been disaggregated by race/ethnicity, age group, campus and grade level, or other relevant characteristic. The list of indicators was developed from the Federal Register guidance, UWSA's and CI:Now's understanding of what issues are important to student and family well-being, and CI:Now's knowledge of what reliable data would be available on a short timeline.

Each indicator source is cited throughout the neighborhood profile. The profile draws from too many data sources to list here, including a number of local private administrative datasets, but the following sources were used heavily.

- Social and economic conditions data from the U.S. Census Bureau American Community Survey
 Five-Year Estimates
- Education data from the Texas Education Agency's Texas Academic Performance Report (TAPR) and Public Education Information Management System (PEIMS) datasets
- Kinder-readiness data from UWSA's Early Development Instrument (EDI) dataset
- Vital statistics, Behavioral Risk Factor Surveillance System (BRFSS), and hospital discharge data from the Texas Department of State Health Services
- Child abuse and neglect data from the Texas Department of Protective and Regulatory Services
- Family violence and other crime data from the San Antonio Police Department
- Youth health-related data from the The Witte Museum's HEB Body Adventure initiative, and highly valuable local dataset given that few Bexar County schools participate in the Youth Risk Behavior Survey (YRBS).

Staff from these and many other local and state agencies spent time, in some cases significant, pulling data and sharing important context and cautions for that data. CI:Now and UWSA are indebted to these individuals and the agencies who allowed them to share their time and expertise.

Analysis and Limitations

As no statistical testing was needed for the neighborhood profile, analysis of the data typically consisted of calculating proportions and rates, with margins of error or confidence intervals where appropriate. Margins of error and confidence intervals are displayed throughout the neighborhood profile. Margins of error were minimized where feasible by using multi-year estimates or three-year moving averages. Where no such solution was feasible and margins of error were quite wide, data values were suppressed and noted appropriately.

Some indicators are broken out geographically by eight sub-county sectors based on Zip Code Tract Areas (ZCTAs), as zip code is a common variable across many local and state datasets. A sector map and ZCTA cross-walk appears at the end of this section.

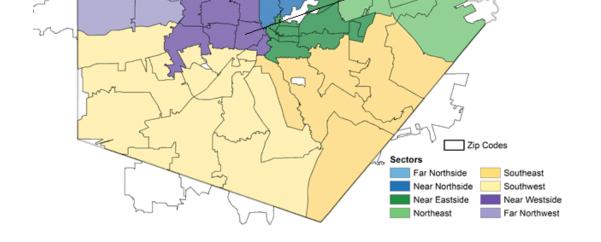

These sectors were developed for the 2013 Bexar County Community Health Needs Assessment in response to the problem of small sample sizes, particularly with regard to the BRFSS dataset. BRFSS and some other survey data could not be presented at the zip code/ZCTA or smaller level because of small numbers that compromised privacy and resulted in unstable rates and extremely wide confidence intervals. CI:Now used a non-statistical process to group adjacent ZCTAs with median household incomes (from Census American Community Survey five-year estimates) more similar than not, and with the aim of having a sufficiently large and preferably similar total population size for each sector. The final groupings, though, also took into account our own local understanding of our "parts of town" as reflected in the commonly-used divisions of north-, south-, east-, and westside. While not ideal, the sector groupings appeared to "hold" fairly well during the 2013 neighborhood profile and were retained for this neighborhood profile.

On the following page is a map of the eight sub-county sectors described above, and a cross-walk between sectors and ZCTAs appears below the map. Other Bexar County reference maps follow with select jurisdictional boundaries overlaid.

WESTSIDE PROMISE NEIGHBORHOOD

STRONG START

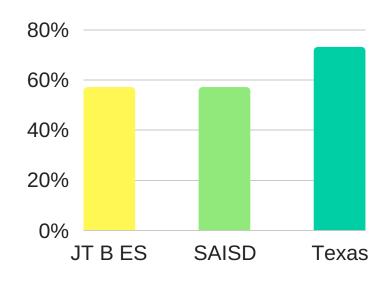

Vulnerable on 1+ Domains

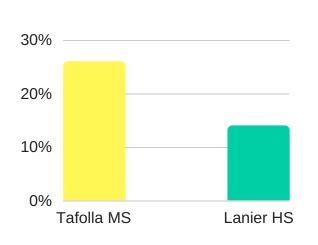

On Track on All Domains

3RD GRADE READING

Students are on par with the district in terms of reading, but below the state achievement average.

MIDDLE SCHOOL

IN-SCHOOL SUSPENSION 2013

OUT-OF-SCHOOL SUSPENSION 2013

HIGH SCHOOL

80-85% graduate

1/3 are college ready

20% of graduating seniors complete one year of higher education

Westside Promise Neighborhood

Kinder Readiness

The Early Development Instrument (EDI) provides a neighborhood-level measure of kindergarten students' readiness to learn in the areas of physical health and well-being; social competence; emotional maturity; language and cognitive development; and communication skills and general knowledge in relation to developmental benchmarks.

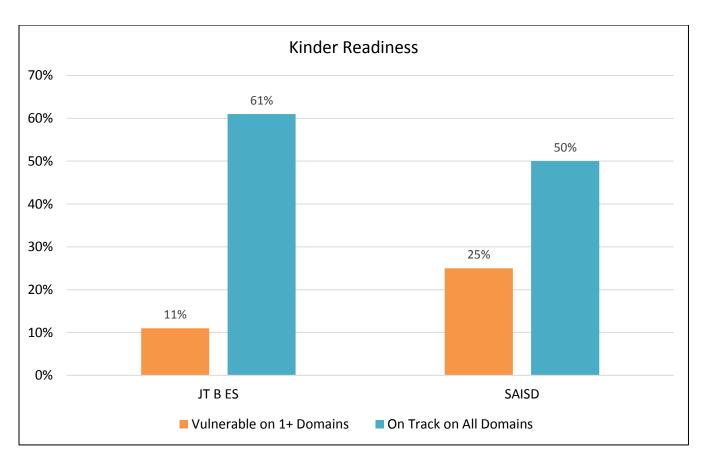

Definition

Percentage of students assessed who are vulnerable on one or more domains & percentage of students assessed who are on track on all domains.

Source

Transforming Early Childhood Community Systems. Early Development Instrument (EDI), 2016.

Results: Year 2016

3rd Grade Reading

Reading proficiency by the end of the third grade is one of the most important benchmarks in a child's academic journey and a major predictor of future educational outcomes.

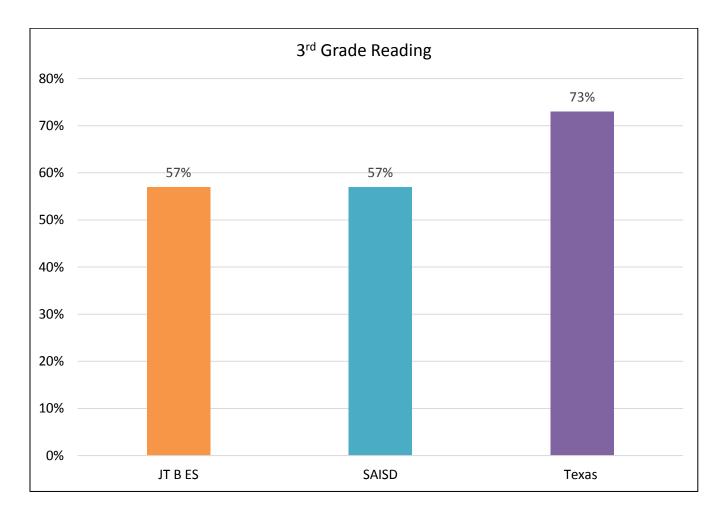

Definition

Percentage of 3rd grade students who met the Level II Satisfactory Standard or above.

Source

Texas Education Agency; Texas Academic Performance Report (TAPR), 2015-2016.

Results: Year 2015-2016

Suspensions

Suspensions are associated with negative outcomes such as lower academic performance, higher rates of dropout, failures to graduate on time, decreased academic engagement, and future disciplinary exclusion.

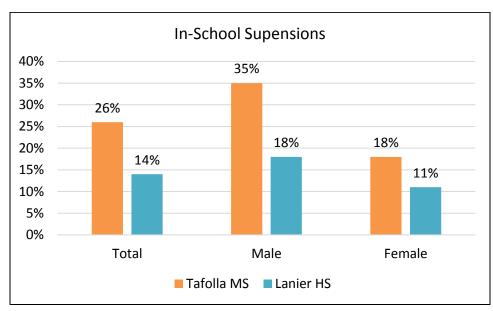

Definition

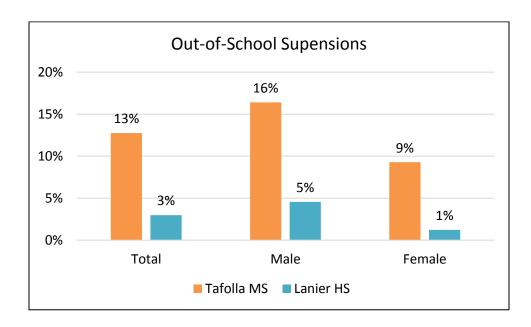

Percentage of enrolled students who received one or more in-school suspensions; and percentage of students who received more than one out-of-school suspension.

Source

Department of Education; Office for Civil Rights (OCR), 2013.

Results: Year 2013

Graduation Rate

Federal graduation rate is the cohort of students who first attended ninth grade in 2011–12. They are followed through their expected graduation with the class of 2015.

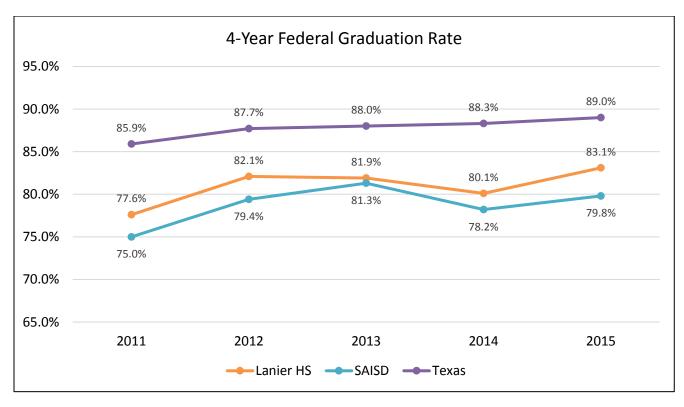

Definition

Percentage of 9th grade cohort graduating within 4 years.

Source

Texas Education Agency; Texas Academic Performance Report (TAPR), 2014-2015.

Trend: WPN 2011-2015

College Ready

The term college ready is generally applied to (1) students who are considered to be equipped with the knowledge and skills deemed essential for success in university, college, and community-college programs, or (2) the kinds of educational programs and learning opportunities that lead to improved preparation for these two and four year collegiate programs.

Definition

Percentage of graduates who scored at or above the college-ready criteria on both ELA and mathematics.

Source

Texas Education Agency; Texas Academic Performance Report (TAPR), 2014-2015.

Trend: WPN 2011-2015
